3.Recommendations

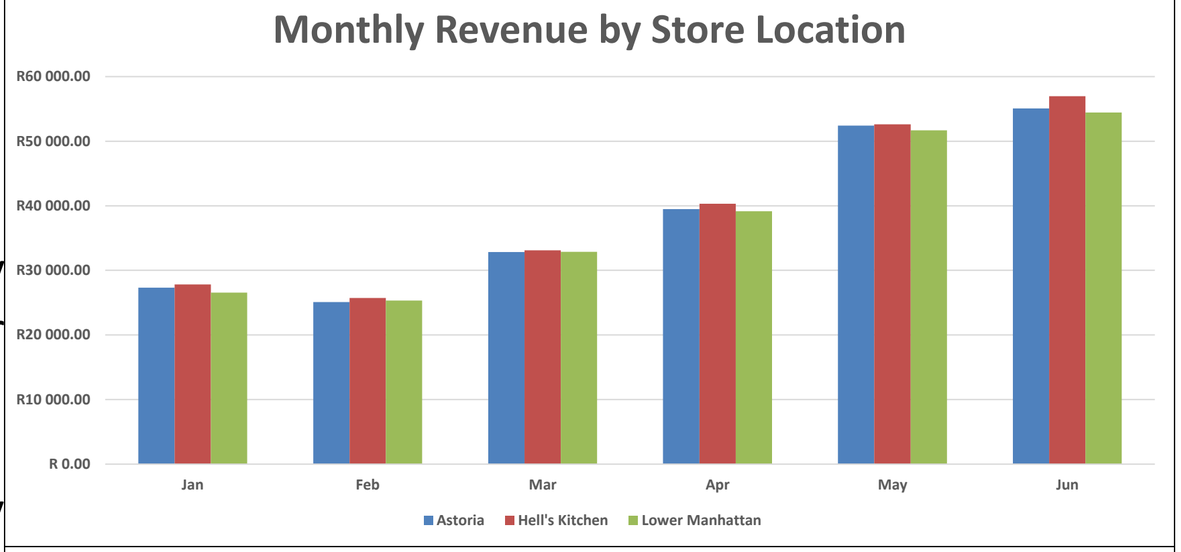
Project Context

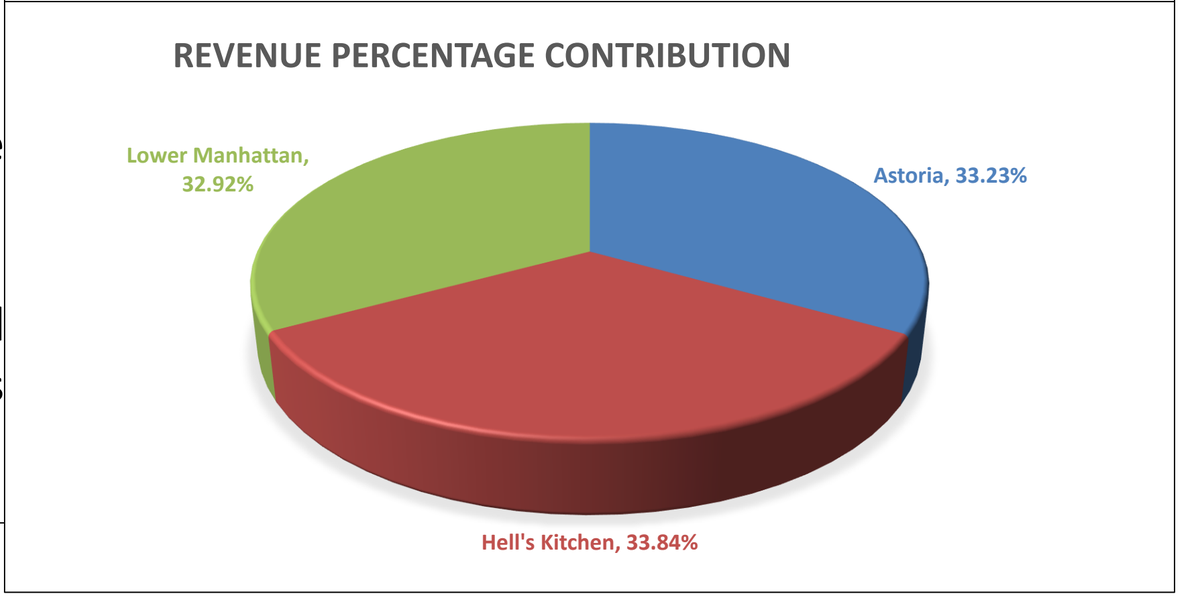
- ✓ Bright Coffee Shop is a growing retail coffee business operating across multiple store locations, including Lower Manhattan, Hell's Kitchen, and Astoria
- ✓ A newly appointed CEO required data-driven insights to support revenue growth and product performance decisions.
- ✓ To support this objective, the analytics team was tasked with transforming raw transactional data into actionable business insights.
- ✓ The company has accumulated detailed daily transactional sales data, capturing customer purchases at product, time, and store level.
- ✓ The project analysed historical sales data using SQL and dashboard visualisation to understand:
    - ➢ Key revenue-generating products
    - ➢ Peak sales periods
    - ➢ Differences in customer spend across store locations
- ✓ Insights revealed that while some stores drive revenue through high customer volume, others generate higher spend per transaction, highlighting opportunities for targeted upselling and promotions.

Revenue Performance

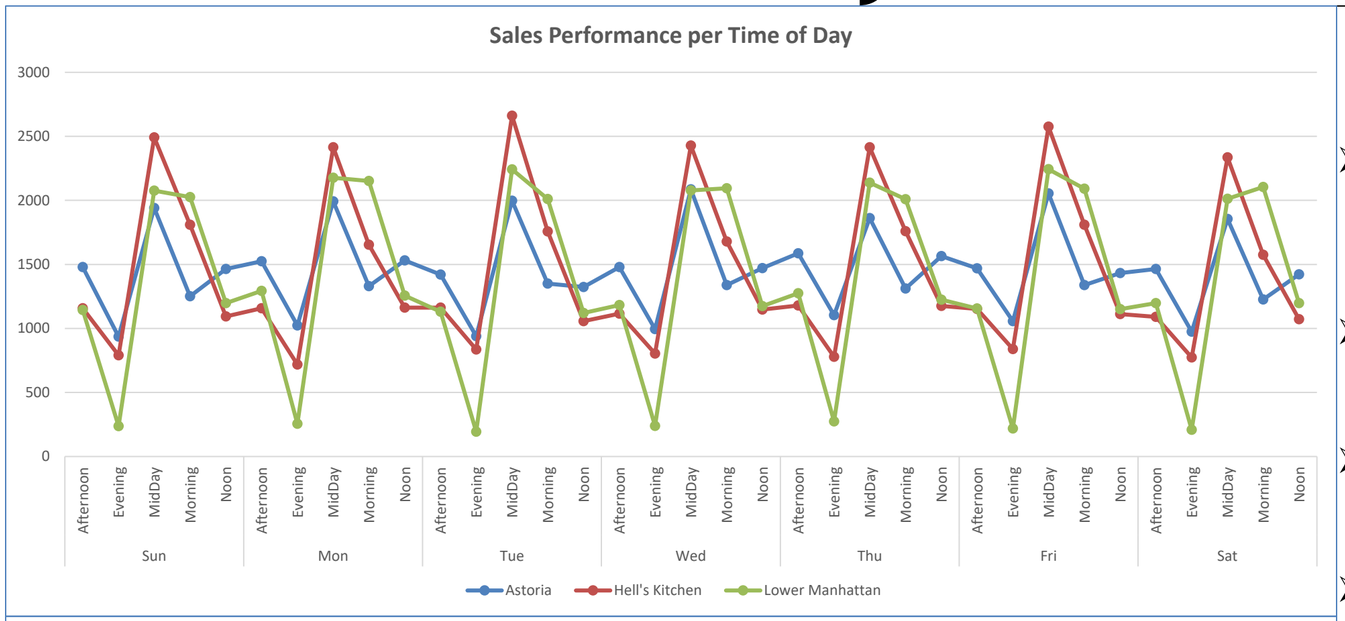
Insights:

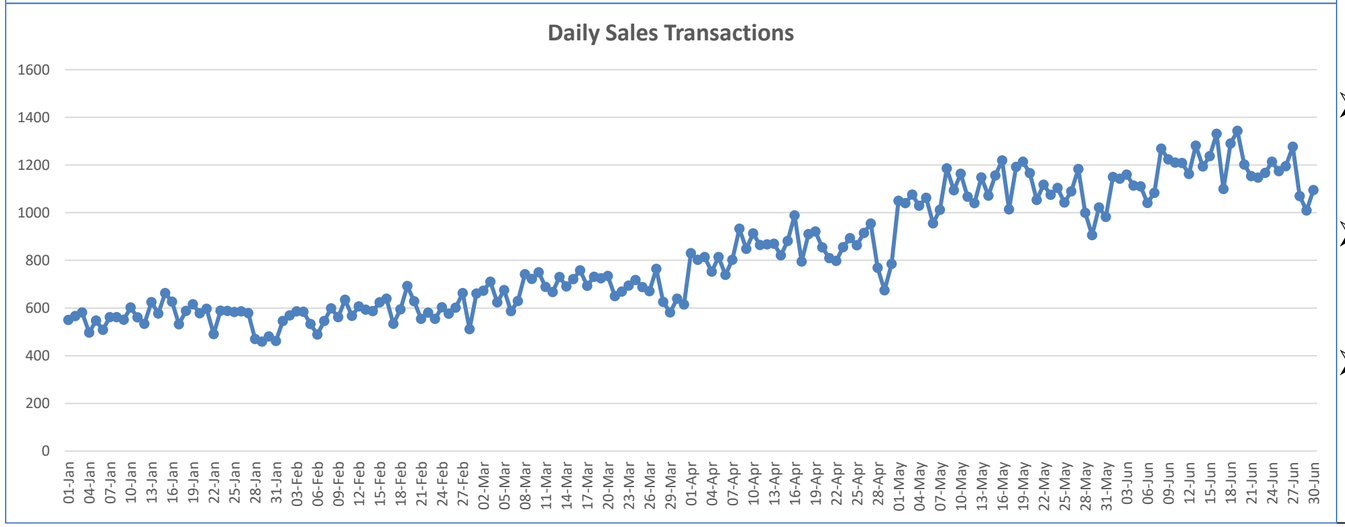
- Total revenue accumulated end of June is **R698 812.33**
- Hell's Kitchen has the highest contribution at approximately **33.8%,** followed closely by Astoria **(33.2%)** and Lower Manhattan **(32.9%)**
- Revenue risk is spread across locations, reducing dependency on any one store
- All three locations show a consistent upward trend in revenue from January to June, indicating strong overall business growth
- Although monthly revenue trends differ slightly, the overall revenue contribution remains evenly balanced across locations.





Daily Sales Trend





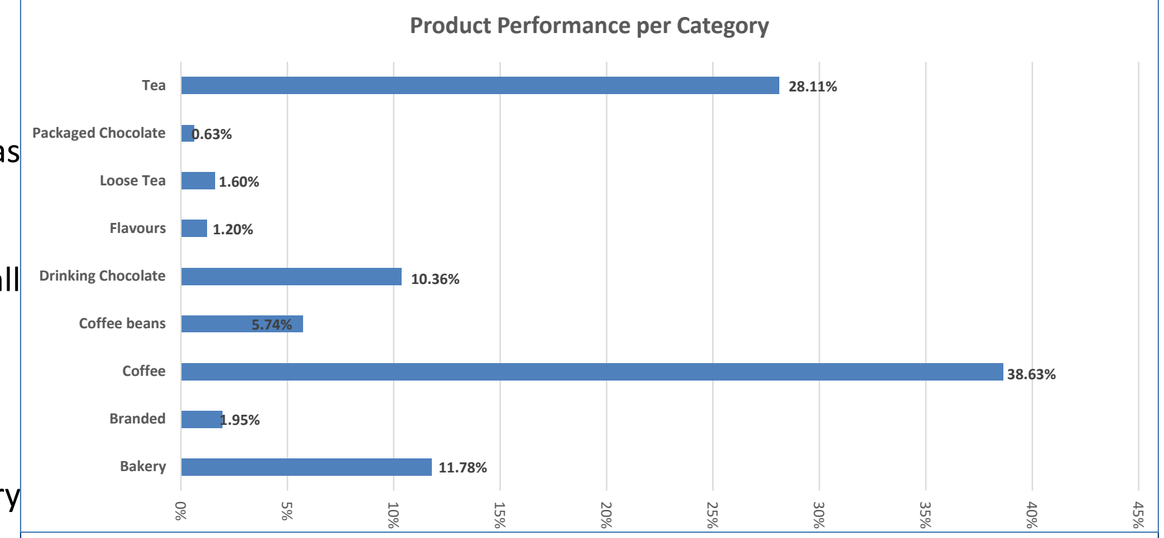
Insights:

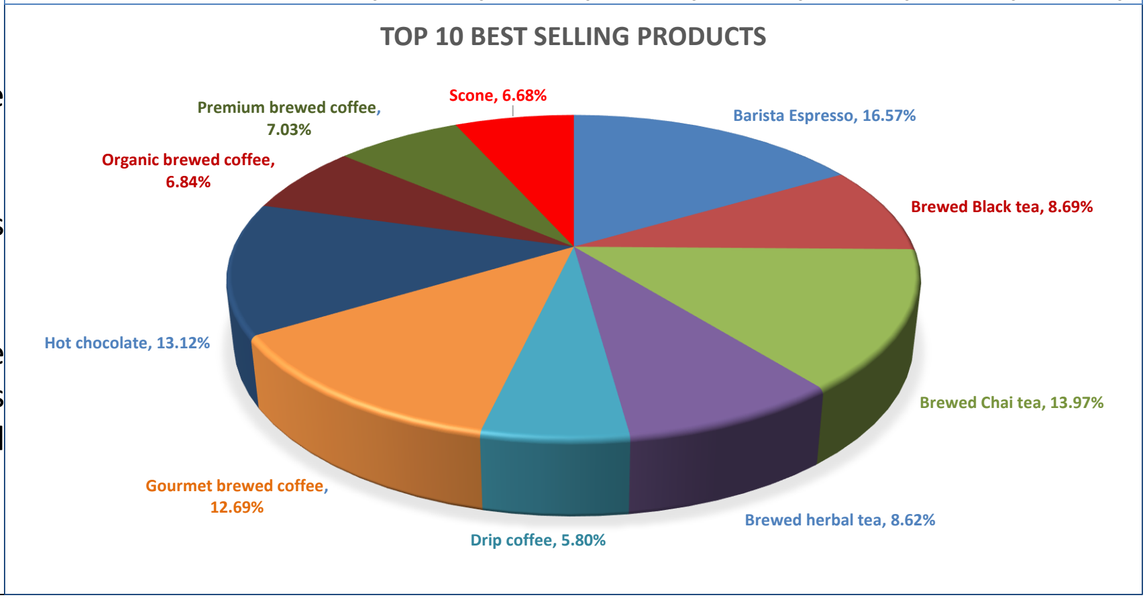
- All three locations (Astoria, Hell's Kitchen, and Lower Manhattan) consistently show their highest sales levels in the morning across all days of the week
- This pattern indicates a strong commuter and breakfast-driven demand, with customers primarily purchasing coffee and quick items before work
- Hell's Kitchen regularly reaches the highest sales peaks, particularly during morning and early midday hours.
- Astoria's sales pattern is more stable throughout the day, with less extreme peaks and dips compared to the other locations.
- Lower Manhattan demonstrates strong morning and midday sales but also shows sharp drops during afternoon periods.
- All three stores experience reduced sales in the afternoon and evening relative to mornings.
- Overall, daily sales transactions show a strong and sustained upward trend over time, indicating growing customer demand, successful scalability, and a stable foundation for future revenue optimisation.

Best Performing Products

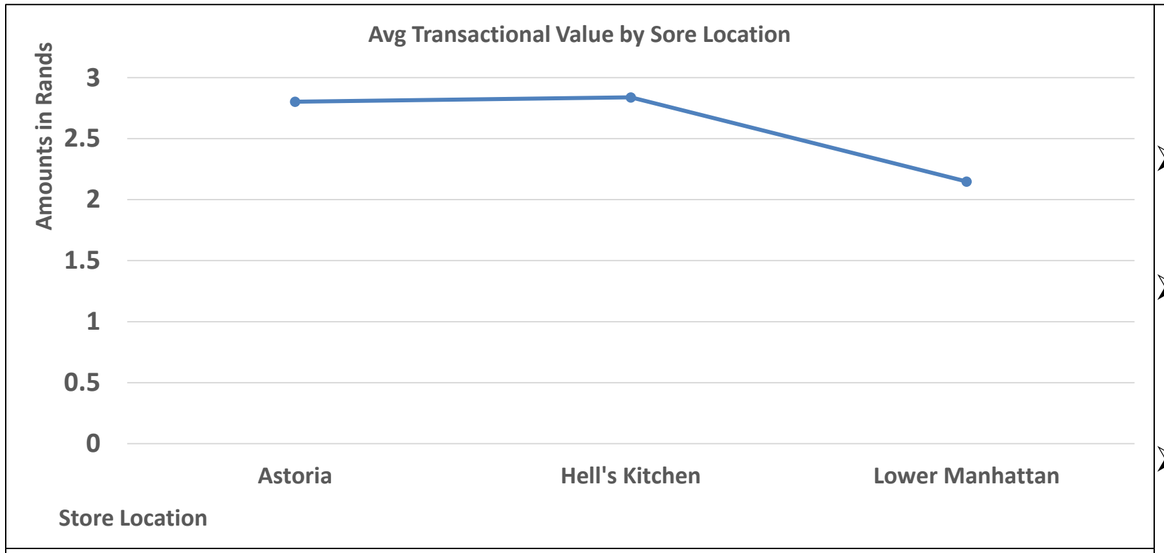
Insights:

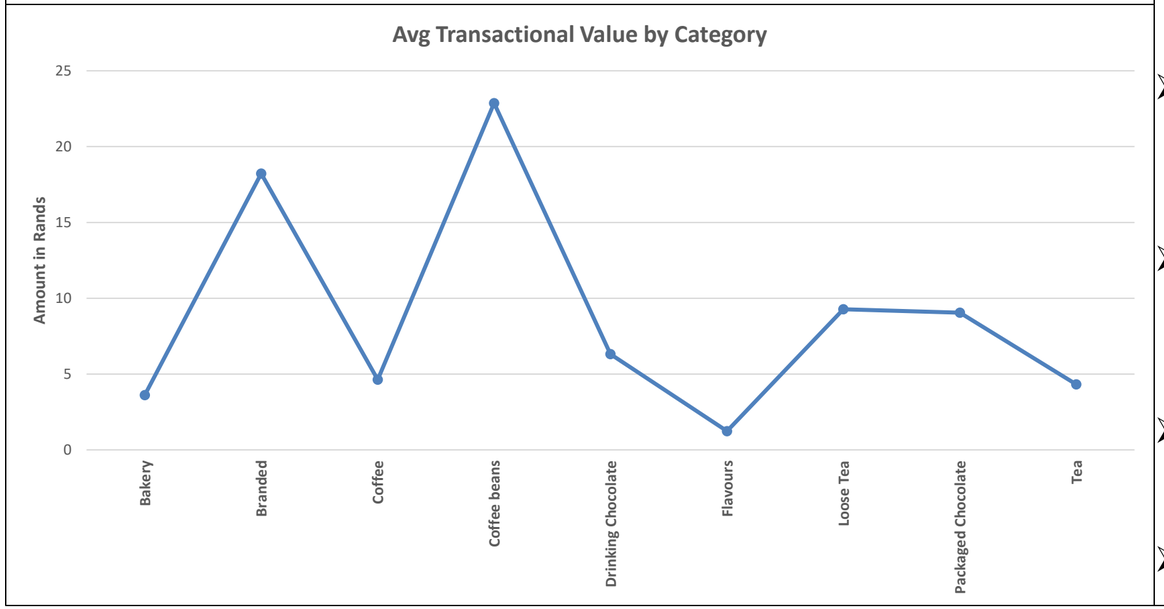
- Revenue is driven primarily by beverage categories, with food and chocolate acting as supporting contributors
- Coffee (≈38.6%) is the largest revenue-contributing category, clearly outperforming all others.
- Tea (≈28.1%) is the second-highest category, indicating strong and consistent demand.
- Bakery (≈11.8%) and Drinking Chocolate (≈10.4%) provide meaningful secondary revenue, often complementary to beverages.
- The dominance of the Coffee category is directly explained by the multiple coffee products appearing in the top-10 list.
- Similarly, the strong Tea category performance is reinforced by several tea variants ranking among best sellers.
- Overall category performance is driven by a small group of best-selling beverage products, with coffee and tea dominating revenue, while select supporting items such as scones and hot chocolate meaningfully enhance total sales through targeted cross-selling opportunities





Customer Buying Behaviour





Insights:

- **Average Transaction Value (ATV)** shows how much an average customer spends per visit, which helps interpret how revenue is being generated per completed transaction

- **Metrics Measure:**
  - Low ATV → customers mainly buy one low-priced item
  - Higher ATV → customers buy bundles or premium items

- Customers at the **Astoria store** spend about **R2.80** per visit - This suggests that mostly single-item purchases (e.g., one coffee) and fewer add-ons like pastries or premium upgrades

- **Hell's Kitchen at R2.85** has the highest average transaction value among the three locations - Customers here are more likely to buy multiple items (coffee + bakery), or choose higher-priced products (espresso drinks, large sizes)

- Despite being a high-revenue store overall, the average spend per transaction is the lowest at Lower **Manhattan at R2.15** on average - this indicates many quick, single-item purchases (commuter behaviour)

- Overall, Bright Coffee's ATV value is relatively low at R3 on average due to: Affordable product pricing and high number of single-item purchases

- This creates a clear opportunity for upselling and bundling

Recommendations

Increase Average Transaction Value Through Bundling

- Analysis shows that overall revenue growth is currently driven more by high transaction volume than by high spend per transaction
- Introduce bundled offers such as: (Coffee + scone, Espresso + pastry of choice, Tea + bakery item) and price bundles slightly lower than individual items to encourage add-ons
- Promote bakery items primarily as add-ons, not standalone purchases

Capitalise on Morning Peak Sales with Premium Upsells

- Sales consistently peak in the morning across all locations, indicating strong commuter demand
- Promote premium beverages (Barista Espresso, Gourmet Brewed Coffee, Chai Tea) during morning hours
- Optimise staffing during peak periods and maintain service quality as volume grows

Target Low-Performing Time Slots with Promotions

- The time-of-day analysis shows consistent dips in afternoon and evening sales across all stores
- Introduce time-based promotions: Buy-one-get-one offers on slower days, Market “Afternoon Pick-Me-Up” deals or discounts

Leverage Best-Selling Products to Lift Category Performance

- Category performance is driven by a small number of hero products (e.g., Barista Espresso, Brewed Chai Tea, Gourmet Brewed Coffee)
- Ensure top-selling products are: Always in stock, featured prominently in menus and displays

Apply Location-Specific Strategies

- The analysis shows different revenue behaviours by store location
- **Hell’s Kitchen**: Pilot premium offerings and limited-time specials
- **Lower Manhattan**: Focus on speed, bundles, and add-ons to increase basket size
- **Astoria**: Maintain consistent pricing and test loyalty promotions
